

TECHNICAL THREAT VULNERABILITY ASSESSMENT

Thank you for taking the time to consider IntraLogic Solutions as the company to help assist your school district with its security needs. We take pride in offering a wide range of highly advanced security and alarm systems, all at cost efficient rates that will increase your security while saving your budget. In working with a number of school districts across Long Island, we have gained a large amount of experience and knowledge in many helpful systems and procedures school districts can utilize at a high level.

Due to recent events, school security has become an issue of the highest importance. At IntraLogic Solutions, we always try to assist our clients, and other organizations facing similar issues, in any way possible. As a company local to Long Island, we feel a strong sense of community with the area. That is why we are proud to offer a full Technical Threat Vulnerability Assessment of your district at ***NO CHARGE***. We believe that by helping in any small way to make schools safer, everyone benefits.

As part of this Technical Threat Vulnerability Assessment, IntraLogic Solutions will first meet with the district administrators to discuss their concerns. We will then visit each building in the district, meet with the principals & head custodians, and complete walkthroughs at all of your facilities. During these walkthroughs, our representatives will evaluate areas related to electronic and physical security, as well as general operating practices & procedures related to security.

The results of this assessment will be documented in a full report to be submitted to the district. This report will include our complete findings, as well as pictures & specific examples, and our recommendations. This will be done at no cost and with no obligation.

For those districts looking to expand on this assessment and review other areas of security in addition to electronic security systems, IntraLogic Solutions has partnered with a leading consulting company on Long Island, who can ensure your district is above & beyond Project SAVE compliance. They will review and help update your project SAVE documentation. They can also provide additional assessment services such as emergency organization reviews, drill planning and exercises (Evacuation, shelter in place, lock-out, lock-down, intruder, active shooter, bomb threat, and early dismissal), emergency contact and communication procedures, and more.

With this expanded assessment, IntraLogic Solutions can also digitize emergency procedures and guidelines to be built right into the electronic security system utilizing the ILS E-map to provide easy access for any system user – ensuring that important information is easily and readily available for anyone who needs it.

Security is increasingly becoming a main focus of school districts across the country. As part of the security industry, IntraLogic Solutions can recognize the high level of importance of student safety. We feel that this Technical Threat Vulnerability Assessment can help ease the burden on school districts, and allow staff to get a professional review of their systems at no cost and no obligation, easing both budget concerns and allowing staff to focus on education.

We thank you again for your time and consideration. If you feel that your district could benefit from this Technical Threat Vulnerability Assessment, please contact us so we can schedule an appointment at your earliest convenience. We hope to hear from you soon.
